Stock Market Trading Process - Microsoft PowerPoint

Types of Orders

- The most common types of orders are
- Market orders:** This type of order guarantees that the order will be executed, but does not guarantee the execution price
- Limit orders:** A buy limit order can only be executed at the limit price or lower.
A sell limit order can only be executed at the limit price or higher.
Example: An investor wants to purchase shares of RIL stock for no more than RS 1260. The investor could submit a limit order for this amount and this order will only execute if the price of RIL stock is RS 1260 or lower.
A limit order is not guaranteed to execute.
- Stop-loss orders:**
 - A buy stop order is entered at a stop price above the current market price. Investors generally use a buy stop order to limit a loss or protect a profit on a stock that they have sold short.
 - A sell stop order is entered at a stop price below the current market price. Investors generally use a sell stop order to limit a loss or protect a profit on a stock they own.
